

# Frontier Markets Equity

## Objective

The Frontier Markets Equity Strategy objective is to outperform the MSCI Frontier Markets Index over the long term by utilizing a concentrated, low turnover, fundamental, bottom-up, relative value approach. By focusing on companies whose stocks sell at a discount to an estimate of their underlying business values, portfolios are constructed with a buffer that should shield investors from protracted stock price declines while offering significant appreciation potential.

*"We believe having in-house equity and debt expertise, augmented by the macroeconomic research of a classically trained economist on staff, gives us a competitive advantage in today's investing landscape."*

2. NET PERFORMANCE IS NET OF HYPOTHETICAL MANAGEMENT FEES AND TRADING COSTS.

## COMMENTARY:

In 2Q 2019, frontier equity markets as represented by the MSCI Frontier Markets Index (net), outperformed all major indices with a return of 4.69%. In our model portfolio, Vietnam and Slovenia were relative outperformers for the month while the laggards were Kuwait and Argentina. Our overweight positions to Energy and Utilities were key contributors from a sector standpoint, while our underweight to Financials (which now comprise over 47% of the MSCI FM Index) was a key detractor.

We had entered 2019 with the base scenario of oil prices continuing to gradually rise, given the drawdown of global inventories, a normalizing of shale projections, and further geopolitical tensions in the Middle East. Energy prices have been volatile in 2019 given recent U.S. – Iran rhetoric and an increase in tensions around the Strait of Hormuz, as well as political instability around key producers Venezuela, Libya, and Nigeria. We expect the next few quarters to show continued support for energy prices and a gradual resumption upwards, especially as spare capacity remains tight. Stock performance within the sector has lagged the underlying commodity's price performance, which we have also encountered in prior rallies. Market participants are generally underweight the sector and given the magnitude of the volatility, consensus has not formed yet that the recent rally has staying power. Regardless, nothing has changed our fundamental view and we are maintaining our overweight.

We have been closely watching Chinese economic data for signs of a slowdown, given the impact on funding for China's One Belt One Road (OBOR) policy, and the potential for negative knock-on effects to frontier market countries linked to OBOR. Worries about a protracted trade battle between the U.S. and China seems to have abated, and our base scenario is an agreement amenable to both sides. We would expect the Chinese equity rally to continue, as recent economic data has been positive. While market participants are discussing the ramifications of the inverted yield curve in the U.S. for emerging and frontier markets, we believe it is too early to call for a potential slowdown.

From a macro standpoint, the recent downtrend in U.S. interest rates and the outperformance of gold and other commodities may portend a weakening of the U.S. dollar in the near future. The 10-year U.S. Treasury yield briefly dipped below the Fed Funds rate in 2Q, which has been a fairly reliable recession indicator over the last few decades. Given the overvaluation of U.S. equities vs. frontier market counterparts, we would expect these negative U.S. macro indicators to be a relative tailwind for frontier market equities.

Going forward, we expect frontier markets to relatively outperform other asset classes, given a combination of high economic growth rates, reasonable valuations (our portfolio trades under 10x current earnings with a 4.3% dividend yield), rising energy and commodity prices, and relative political stability in key frontier market countries such as Vietnam and Kuwait.

**RVX Model Portfolio Hypothetical Performance/Gross of Fee Returns:** This material includes information related to the gross and net (hypothetical) performance of the RVX Frontier Markets Equity strategy. The performance results included in this material related to RVX's model are hypothetical returns which have been compiled by RVX. The model performance results do not represent actual trading and that they do not reflect the impact that material economic and market factors contributed to the Adviser's decision-making if RVX were actually managing clients' money pursuant to the depicted model.

The hypothetical model performance shown herein is based on simulated or hypothetical trades made by RVX for the referenced hypothetical model containing investments of the type RVX generally expects to purchase for accounts utilizing its emerging markets and frontier markets strategies (although there may be potentially significant differences which may affect performance). The assets which formed the basis for the hypothetical performance were invested in a style currently expected to be so similar to the fund or a real portfolio utilizing RVX's strategy that RVX believes this information to be relevant to prospective clients. The U.S. dollar is the currency used to express hypothetical model performance. All hypothetical model performance shown herein is not necessarily based on the same types of gains. Hypothetical model performance figures shown herein include reinvestment of all dividends, interest, and capital gains, are pre-tax averages of individual year's results (unless otherwise indicated), are based on end-of-day data, and are presented gross of advisory fees and estimated commission fees. All hypothetical model results are estimated, unaudited, subject to adjustment, and not intended to comply with AIMR-PPS™ or GIPS guidelines. Furthermore, hypothetical model results may not reflect the correct impact, if any, that certain market or economic factors might have had on RVX's decision making if RVX were actually managing a client's money. No hypothetical model performance is a guarantee of future results, and no representation is being made that any fund or account of RVX will or is likely to achieve profits or losses similar to those shown or described herein. Bear in mind that if hypothetical model performance results were for the funds or a client's actual portfolio, RVX'S advisory fees and fund trading costs, fees and expenses (including custody, third party administration fees, audit fees, legal fees, etc.) would materially decrease such returns.
